how the concept of proof has enabled the creation of mathematical knowledge the story of proof investigates the evolution

of the concept of proof one of the most significant and defining features of mathematical thought through critical episodes in its history from the pythagorean theorem to modern times and across all major mathematical disciplines john stillwell demonstrates that proof is a mathematically vital concept inspiring innovation and playing a critical role in generating knowledge stillwell begins with euclid and his influence on the development of geometry and its methods of proof followed by algebra which began as a self contained discipline but later came to rival geometry in its mathematical impact in particular the infinite processes of calculus were at first viewed as infinitesimal algebra and calculus became an arena for algebraic computational proofs rather than axiomatic proofs in the style of euclid stillwell proceeds to the areas of number theory non euclidean geometry topology and logic and peers into the deep chasm between natural number arithmetic and the real numbers in its depths cantor gödel turing and others found that the concept of proof is ultimately part of arithmetic this startling fact imposes fundamental limits on what theorems can be proved and what problems can be solved shedding light on the workings of mathematics at its most fundamental levels the story of proof offers a compelling new perspective on the field s power and progress

this book constitutes the refereed proceedings of the 9th international conference on software engineering and formal methods sefm 2011 held in montevideo uruguay in november 2011 the 22 revised regular papers presented together with 1 short paper 2 tool papers and 4 keynote talks were carefully reviewed and selected from 105 initial abstracts and 85 full submissions besides the regular session the conference held a special track devoted to modeling for sustainable development with 5 accepted papers selected from 7 submissions that are also part of this volume the aim of sefm is to advance the state of the art in formal methods to scale up their application in software industry and to encourage their integration with practical engineering methods

this book is a text for junior senior or first year graduate courses traditionally titled foundations of geometry and or non euclidean geometry the first 29 chapters are for a semester or year course on the foundations of geometry the remaining chapters may then be used for either a regular course or independent study courses another possibility which is also especially suited for in service teachers of high school geometry is to survey the the fundamentals of absolute geometry chapters 1 20 very quickly and begin earnest study with the theory of parallels and isometries chapters 21 30 the text is self contained except that the elementary calculus is assumed for some parts of the material on advanced hyperbolic geometry chapters 31 34 there are over 650 exercises 30 of which are 10 part true or false questions a rigorous ruler and protractor axiomatic development of the euclidean and hyperbolic planes including the classification of the isometries of these planes is balanced by the discussion about this development models such as taxicab geometry are used extensively to illustrate

theory historical aspects and alternatives to the selected axioms are prominent the classical axiom systems of euclid and hilbert are discussed as are axiom systems for three and four dimensional absolute geometry and pieri s system based on rigid motions the text is divided into three parts the introduction chapters 1 4 is to be read as quickly as possible and then used for ref erence if necessary

this book offers a unique opportunity to understand the essence of one of the great thinkers of western civilization a guided reading of euclid s elements leads to a critical discussion and rigorous modern treatment of euclid s geometry and its more recent descendants with complete proofs topics include the introduction of coordinates the theory of area history of the parallel postulate the various non euclidean geometries and the regular and semi regular polyhedra
