the current cutting edge vlsi circuit design technologies provide end users with many applications increased processing power and improved cost effectiveness this trend is accelerating with significant implications on future vlsi and systems design vlsi design engineers are always in demand for front end and back end design applications the book aims to give future and current vsli design engineers a robust understanding of the underlying principles of the subject it not only focuses on circuit design processes obeying vlsi rules but also on technological aspects of fabrication the hardware description language hdl verilog is explained along with its modelling style the book also covers cmos design from the digital systems level to the circuit level the book clearly explains fundamental principles and is a guide to good design practices the book is intended as a reference book for senior undergraduate first year post graduate students researchers as well as academicians in vlsi design electronics electrical engineering and materials science the basics and applications of vlsi design from digital system design to ic fabrication and fpga prototyping are each covered in a comprehensive manner at the end of each unit is a section with technical questions including solutions which will serve as an excellent teaching aid to all readers technical topics discussed in the book include digital system design design flow for ic fabrication and fpga based prototyping verilog hdl ic fabrication technology cmos vlsi design miscellaneous it covers basics of electronics and reconfigurable computing plds latest technology etc

researchers in the field of engineering or physical sciences resort to experimental methods and or simulation approaches as a part of their work this book provides the relevant concepts and methods in a cohesive manner organized into eighteen chapters the book covers the basic concepts of research and the research process and guides researchers to develop adequate skills and capabilities to prepare papers for publication in refereed journals to write synopses of their research work and to face the oral examination and defend their theses confidently

artificial intelligence in design 91 is a collection of 47 papers from the first international conference on artificial intelligence in design

held at edinburgh in june 1991 the papers in this book are grouped into 13 headings starting with a background of ai design systems and to which extent ai that results from being used as planning tool be applied to quality oriented design processes in architecture a constraint driven approach to object oriented design is also shown on real world objects the use of cadsyn in the structural design of buildings is examined along with design dependent knowledge and design independent knowledge discussions on empowering designers with integrated design environments are given whereby design objects may be retrieved from catalogues without requiring users to form queries mention is given to automated adjustment of parameter values frequently used in computer routine applications the book also introduces the computer aided design cad as applied to architecture design representation using data models non monotonic reasoning in design and the cognitive aspects of design using empirical studies are discussed topics of the industrial applications of ai in design such as the needed steps to develop a successful ai based tool and a review of the castlemain project and telecommunication distribution networks follow this book is suitable for programmers computer science students and architects and engineers who use computers in their line of work

this three volume book contains the proceedings of 5th international conference on advanced computing networking and informatics icacni 2017 the book focuses on the recent advancement of the broad areas of advanced computing networking and informatics it also includes novel approaches devised by researchers from across the globe this book brings together academic scientists professors research scholars and students to share and disseminate information on knowledge and scientific research works related to computing networking and informatics to discuss the practical challenges encountered and the solutions adopted the book also promotes translation of basic research into applied investigation and convert applied investigation into practice
